

# ACP/HLB Update For Riverside County

## **HLB UPDATES**

A total of **161** residential citrus trees have been confirmed positive for HLB in Riverside County. New HLB tree detections continue to be found in the cities of Corona and Jurupa Valley. [HLB quarantine maps](#) can be found in the Citrus Insider website. **When moving citrus from, to, or within an HLB quarantine**, please review the [HLB and ACP regulatory protocols](#) and contact the [Riverside County Agricultural Commissioner's office](#) to submit the required mitigation forms. **If you need a pest control or tree removal referral**, please contact me, Sandra Zwaal [szwaal2@gmail.com](mailto:szwaal2@gmail.com).

## **ACP MONITORING**

Now more than ever, citrus growers should remain vigilant and keep ACP populations low to reduce the risk of HLB. Keeping ACP populations low in generally infested areas such as Riverside County reduces the risk of citrus trees acquiring the bacteria that causes the deadly HLB disease. Growers should monitor your citrus for ACP and apply the ACP area-wide treatments during the ACP area-wide treatment windows. The University of California (UC) provides excellent resources on [how to monitor ACP](#).

## **UPCOMING EVENTS**

### **Citrus Pest & Disease Prevention Committee (CPDPC) Meetings**

The Citrus Pest and Disease Prevention Committee (CPDPC) meetings are free and open to the public. The virtual meeting agendas, minutes and schedules are posted in [www.cdфа.ca.gov/citruscommittee/](http://www.cdфа.ca.gov/citruscommittee/).
